Projects

Productuvio | *HTML, CSS, JavaScript, React*
- Developed a comprehensive productivity web application for a school project.
- Designed and implemented multiple webpages using JavaScript and Tailwind to create a user-friendly interface for several features on the app.
- Utilized React to create a Pomodoro timer in the application that would store session data for the user.
- Implemented a strong back-end using MongoDB to store and manage information on users and items in their to-do lists.
- Ensured a responsive design for optimal user experience across various devices.

Maze Solver | *Java*
- Developed a maze solving application in Java with a focus on recursive algorithms.
- Utilized recursive backtracking to find the most optimal path through the maze.
- Designed and implemented a clean user interface, allowing users to visualize the maze-solving process.
- Developed robust input handling for loading maze configurations from external files.

Weather Website | *HTML, CSS, JavaScript*
- Developed a responsive weather website to provide real time weather information from around the globe.
- Integrated the OpenWeatherMap API for live weather data.
- Deployed the website on Cyclic.
- Gained a better understanding of APIs in the process.
